TEST REPORT

DEPARTMENT OF CLINICAL CHEMISTRY I

Magnesium, Serum

Investigation	Observed value	Biological Reference value
Magnesium Method:Xylidyl Blue	2.0	1.6-2.4 mg/dL

Interpretation:

- This assay is used for diagnosing and monitoring Hypomagnesemia and Hypermagnesemia.
- Hypomagnesemia have shown correlation with changes in calcium-, potassium-, and phosphate-homeostasis which are associated with cardiac disorders such as ventricular arrhythmias that cannot be treated by conventional therapy, increased sensitivity to digoxin, coronary artery spasms, and sudden death.
- Additional concurrent symptoms include neuromuscular and neuropsychiatric disorders.
- Hypermagnesemia is found in acute and chronic renal failure, magnesium excess, and magnesium release from the intracellular space.

* Sample processed at National Reference Laboratory,Tenet Diagnostics,54, Kineta Towers, Journalist Colony, Banjara Hills
